better sleeping climate

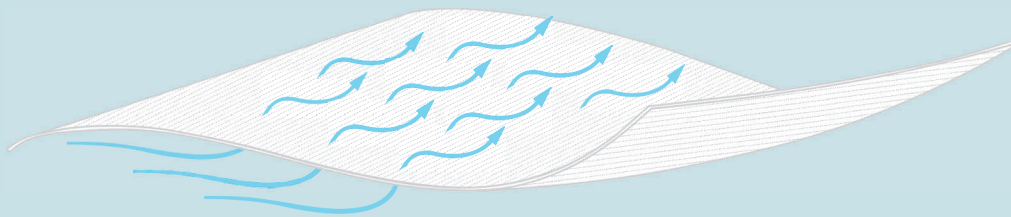

# Easy Air

**Easy Air** articles are unique in the market. The latest machine technology, deep textile Know-How and the right machine settings enable ground-breaking properties.

The **Easy-Air** fabrics of STS Textiles convince with a really high air-permability. The fabric has an open structure, which gives the space to the air to circulate and to breathe. Result of this are much lower differential pressures while the air is circulating.

All **Easy-Air** fabrics of STS Textiles have been tested on their air-permability according to DIN EN ISO 9237:1995. The minimum result of an Easy-Air fabric of STS Textiles is an air-permability of 2000 l/m<sup>2</sup>/s.

Due to that Easy-Air Articles give the mattress the ability to breathe. This allows an effective transport of excessive heat, faster transpiration of moisture and a really good air-circulation. Result of using **Easy-Air** fabrics are:

- increase protection against micro-organisms
- prevention of heat accumulation
- better moisture-transport
- temperature-regulation
- increase of wellbeing
- highly increased air-circulation
