

...more than sun protecting

Overheated and sticky rooms in summer – everyone knows.

Pervious shading solutions are limited, they only block out or reflect solar radiation. They can't stop the heat input efficient.

Sunsafer has a new revolutionary approach. This patented technique blocks out the sunlight and additionally stores the energy of the sun like batteries.

This stored energy can be used later with an efficiency of 96 %, to heat the rooms during the night.

This unique characteristics can take the sunenergy from the day to the night. The room climate will be much more comfortable even at strong sun power during the day. Sunsafer helps to save heating energy and reduces the cost of air-condition.

- first fabric which earns money
- effective storage of energy/warmth
- improves the temperature comfort in rooms
- high efficiency no follow-up-costs
- maintenance-free
- simple handling during make up
